

the Piper Focus

Floating Frostiness

Architectural design elements create a modern, industrial look for Turner Market

The designers of Turner Market in Atlanta, GA. had a very unique vision for their serving counters. Piper's experience with custom fabrication was the obvious choice for manufacturing. Our designers worked closely with Rapt Studio of San Francisco to create a one-of-a-kind buffet line incorporating a visually striking steel gridwork supporting beautiful quartz counters. The Frost Top and Hot Top portions of the 3 units were artfully designed without undercounter cabinetry. All mechanicals were routed into the adjacent base, creating the look of a suspended counter. The full-length tempered glass guard includes LED lighting and virtually disappears into the design. The result of adding these intricate details is a dramatic dining experience like no other.
