Heated Grab-N-Go

Standard Features

Piper Products Series H-GNG Heated Merchandisers provide self-service for a wide variety of foods. Shelves are at ergonomic heights, allowing customers to view the foods before reaching the display. The heating system is carefully engineered to efficiently hold foods at temperatures that are in accordance with the latest food safety standards.

CONSTRUCTION

The base cabinet is constructed of rigid, moisture resistant PVC composite panels that will not warp, swell or deteriorate from water contact. The color of the panel goes through to the core to hide any mars or scratches. The interior display area is built of stainless steel and includes removable shelves that can be mounted at three different angled positions. An LED Light is included in the top. Additional lighting may be ordered. Aluminum price tag molding for each shelf is standard. End panels are tempered glass.

Heating

Each shelf is heated by a foil heater mounted to the underside of the shelf with a stainless steel protective cover. A stainless steel rail sits on top to keep product in place.

Capacity

Capacity depends on the types of food and their containers.

Model #	H Height	HC Height w/ Casters	W Width	L1 Amperage	L2 Amperage	NEMA Cap No.
H-GNG-LPRO-3	56"	59.7"	36"	9.2	8.85	14-20P
