## Adjustable Height Serving Counters

Raise from 30" to 36" in seconds

An innovative way to offer self-service accessibility to a wide range of ages is to include adjustable height counters in your cafeteria lineup. Popular with elementary schools, a simple turn of a handle can raise a table from a petite height of 30" to any increment up to 36". Electric models are also available for an even easier transformation with just a push of a button. They can be ordered with casters or stainless steel legs. No longer will first graders have to reach, or sixth graders have to stoop. Just adjust the height before the next meal service period - it only takes seconds! You'll experience better traffic flow and fewer spills when the equipment is sized accordingly. Call Piper today to learn more about our adjustable height serving counters!
