

## Classic Style Protector Guards

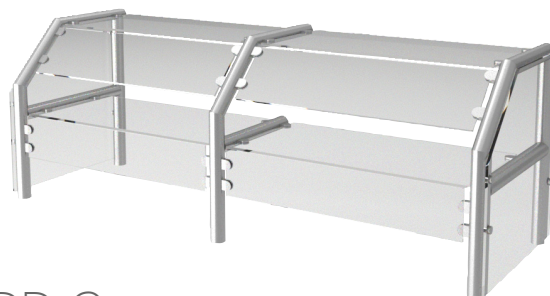

Keep food safety a top priority with full coverage

During these trying times, it's more important than ever to ensure food safety in a buffet setting. Our Classic Style Protector Guards are meticulously designed to meet NSF food-safety requirements and are available in many styles and sizes. They can be installed anywhere including our Elite and Reflections serving equipment, or on custom millwork over drop-in wells, solid tops and frost tops. They are constructed of 1-5/8" diameter stainless steel, and tempered glass is standard. Then choose from a variety of light styles to brighten up the space, including energy efficient LED light strips, and Heat-and-Light options. The simple-straightforward design makes cleaning easy to help you keep germs at bay. So when we make it through this crisis you can continue to offer safe, hygienic options to your customers, to not only help keep them healthy, but your business healthy too.

CPG-C

The CPG-C is an attractive protector guard option for full-service cafeteria operations.

CDD-C

The CDD-C is our classic-style double display for use with single-sided buffet or cafe lines. For double-sided buffet lines, order the BDD-C.

BPG-1C

The single-sided, classic style buffet protector guard is perfect for self-service lines, but is also appropriate in full-service operations.

BPG-C

Piper's BPG-C is the perfect solution for your double-sided buffet lineups. Shown with incandescant light strip option.
